

Dear Parents,

In our class we used Scratch, free software from Massachusetts Institute of Technology that was designed by MIT to introduce students to coding. Learners of all ages use Scratch to make animations, video games and program sensors using a visual programming interface.

Scratch is designed for students to share and learn from each other's work. With your permission, your child may create a free online account for this purpose. Otherwise, to edit and play the program that we made today or others like it, you may download the offline editor. Links for both options and parent information are below.

If you have questions or would like to share about what your child makes next, I'd love to hear from you!

You may reach me by email, text or phone call:
